Dragados Canada has experience in infrastructure, bridge, highway, tunnel, dam and marine projects, and is a leader in alternative project delivery, including design-build projects for public and private owners.

The progress of society means a change in the conditions of daily life, particularly in those that surround business development. The increasing complexity of production process developments requires a continuous adjustment of work methods.

The contribution of construction companies requires taking up great responsibility and high quality challenges which need the best professionals and the best techniques available.

It is our policy that all steps are taken to ensure:

- the commitment, as a team and as individuals, to understanding our client requirements and expectations;
- the provision of quality products and services to our customers and stakeholders;
- that all persons working on the different projects and different branches strive toward commitment to the continuous improvement of effectiveness of the Quality Management System;
- that all the team members strive to meet customer and stakeholders expectations;
- the continued implementation of processes and activities designed to increase the quality of the delivered products.

“Quality is never an accident; it is always the result of high intention, sincere effort, intelligent direction and skillful execution”

Roman Garrido
Dragados Canada President
